Universitat Oberta de Catalunya
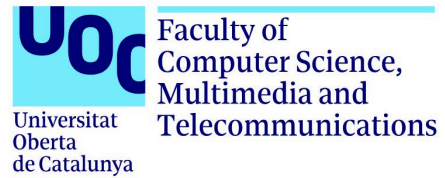

To whom it may concern,

I am writing to enthusiastically recommend Andrea García Alonso as a web developer with a specialization in bioinformatics. Over the past five months, I have had the pleasure of working closely with Andrea during her internship with NeuroADaS Lab research group on a project that required not only technical expertise, but also a nuanced understanding of medical data and user-focused design.

Andrea combines knowledge of modern web development tools with a firm grasp of bioinformatics concepts. Her work is characterized by clean, scalable, responsive, well-documented code and intuitive interfaces that make web pages user friendly.

One of her most notable contributions was the improvement of the development of the webpage https://neuroadaslab.com, a webpage that contains an application that visualizes CAPTCHAs that enrich a health-related citizen science project. The webpage also contains a web-annotation tool that allows users to tag health images that enrich an artificial intelligence system that enhances the understanding of people's health.

Beyond technical skill, Andrea is a collaborative team player who communicates effectively with researchers, designers, and other developers and organizes her work effectively.

I am confident in her ability to contribute to any research or industry team working at the intersection of bioinformatics and technology. Andrea would be an invaluable asset to any organization seeking a forward-thinking, capable, and passionate web developer in the bioinformatics space.

Please do not hesitate to contact me for further information.

Yours faithfully,

Laia Subirats Maté
